

## Exhibit 7

Generally, the length 22 of the fastening panel is at least about 15% of the length of the pant and ideally the length of the fastening panel is at least about 20% of the length of the pant. Generally, the combined length of the [3] elastic panels and the front fastening panel (the sum of 22 and 23) should be at least about 7% of the length of the total pant. Optimally, this combined length should be at least about 25% of the total pant and ideally this combined length should be from about 40% to about 60% of the length of the pant.

Generally, the widths of the front and back ends of the chassis are the same. However, the chassis may be wider in front or back.
